Micro Pack XPress

Reduced to the
maximum

Small content maximum packed

Small things need protection. Tiny screws, for example. Our MicroPackXPress is the expert when it comes to protecting your products perfectly. It fixes micro screws with thread diameters of 1.5 to 3 millimeters securely and firmly in the base. The practical clamping system also allows you to combine several packages into sets. These are not only space-saving, but also easy to store and transport. By the way, MicroPackXPress can easily be turned into a sterile package by adding an outer blister for example.

All this is not rocket science. It is simply a small package. But one with so many advantages that in the end it is amazing again.

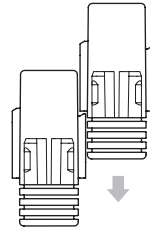

MicroPackXPress – presents your product with the value that a precision medical device deserves. This is ensured by the cap made of clear PETG.

LINKING FEATURE

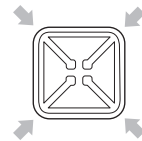

For the flexible composition of sets.

With the practical connector system you can string together several packages to form sets. This saves space and optimizes storage and transport.

BASE

XPress base design for simple and secure loading/removal of the product.

MATERIAL

outer part: PETG
base: Polyethylene (PE)
